Swinburne University of Technology
SWE30003 Software Architectures and Design
Tutorial Week 1
(Introduction & Group Formation)

1. A brief introduction of the unit. Q&A.
2. Group formation: In this semester, assignments and tutorials are mostly done in groups. Please
 - (1) Form groups of 3~4 students from your tutorial – **all members of a group need to be from the same tutorial class;**
 - (2) Introduce yourself to the group;
 - (3) Nominate a group contact person, complete the group formation page (available on Canvas), hand/email it to your tutor, AND keep a copy for yourselves for future reference.

Discuss in your group:

3. Based on your understanding from your previous studies, what are the main software development activities? What is the software development lifecycle (SDLC)? What are some example SDLC models?
4. What do “software design” and “software architecture” mean to you?
